

world leader

As an international company, Viracon offers the most complete range of high-performance architectural glass products available worldwide. We're a company that not only fabricates glass, we're also a company that delivers design, aesthetic, budget and performance solutions for client projects. Our success is reflected in our long-lasting relationships. These relationships have given Viracon a visible presence on skylines around the world, including Asia, Australia, Europe, North America, South America and the Middle East.

Since 1970, Viracon has expanded its facilities to perform more glass fabricating processes at a single site than any other fabricator in the world. We believe in selling glass solutions, which means helping clients explore all the options for each step of a project.

Our complete product line includes insulating, laminated, silkscreened, spandrel, hurricane-resistant, acoustical, blast-mitigating, heat-treated and high-performance coated glass. Viracon is a subsidiary of Apogee Enterprises, Inc.

Quality and Commitment

Specifying the right glass for a commercial architectural project is not as easy as one may think. Today, designers are responsible for meeting design requirements, performance levels, aesthetics, building codes, life-cycle costs and budget constraints. At Viracon, we're here to help make it easier by offering practical glass solutions that meet specific project needs.

Field Sales Representatives

Viracon's field sales representatives offer expertise in the architectural glass industry. They provide architects with design assistance, budget costing, return on investment costing and specification writing. In addition, they act as the liaison between the architect, Viracon and the glazing contractor. Our field sales representatives work closely with the glazing contractor, offering assistance with initial project costs, final pricing negotiations, product information and job site inspections.

Account Representatives/ Customer Support

Viracon's customer support representatives help with quoting, product performance data, pricing, project coordination, samples and mockups—ensuring customer satisfaction through project completion.

Architectural Technical Services

Viracon's Architectural Technical Services Department assists with performance and environmental analyses, windload and static load calculations, and hurricane and blast mitigation requirements.

Architectural Design Group

Viracon's Architectural Design Group provides specification and design assistance, product performance data, and specification review of your master format and for specific projects.

fabrication capabilities

Viracon can perform virtually any glass fabrication process needed for a commercial building project. These include: cutting, sandblasting, painting, coating, laminating, heat-treating, insulating and edging.

All of our products conform to strict performance standards. They are tested and retested by our Quality Assurance Department, as well as independent laboratories.

quality

ISO 9001:2000

Viracon is ISO 9001:2000 certified through SGS International Certification Services, Inc. (SGS ICS). This certification encompasses Viracon's entire operation—sales, customer service, financial services, scheduling, purchasing, fabricating and shipping—to ensure a consistent level of quality in production.
